

PRODUCT INFORMATION BULLETIN
HYDRA~AID™ HOT & COLD BEVERAGE THICKENER
SHELF LIFE INFORMATION

HYDRA~AID INGREDIENTS:

Distilled Water
Xanthan Gum
Sodium Benzoate
Potassium Sorbate
Citric Acid

Hydra~Aid meets the definition of a "high acid" food and is produced using the "hot fill" process which "pasteurizes" the product prior to packaging. Plus, the low pH (citric acid) potassium sorbate and sodium benzoate create an environment that does not support microbial growth, including yeast and mold. An independent lab has confirmed the absence of such growth over time.

EXPIRATION DATE

The unopened product carries an expiration date of two years from date of manufacturer. Unopened packets and bottles may be stored at temperatures from 35°F. to 100°F.

STORAGE

Opened bottles may be stored at room temperature for up to ninety days. Any product remaining in opened bottles after ninety days should be discarded along with the bottle. Users should also note that the bottles are not designed for reuse and when empty should be discarded. (Please refer to PIB for Hydra~Aid "Bulk Package" for details concerning handling and cleaning of the bottle pumps.)

Opened packets with any product remaining in them should be immediately discarded.
